

How do I refresh my Docket® account with new data?

Got a new immunization or test result? Follow these steps:

Using the mobile app:

Drag-to-refresh the Immunization Records or Test Results screen to update your Docket® account with new data. You can also refresh the app using the recycle button.

Note: Docket® supports consumer access to certain test results in select jurisdictions.

Using the web app:

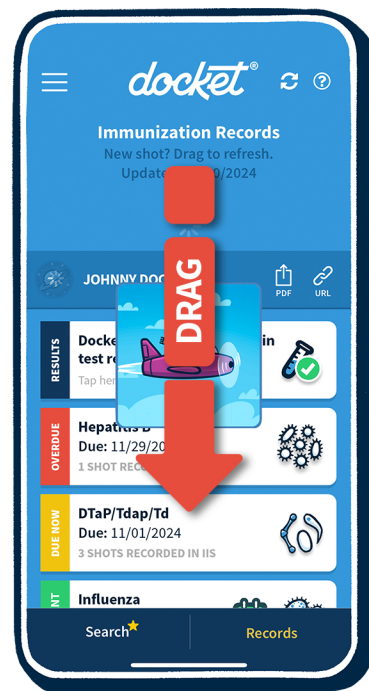

Click the recycle button to refresh the Docket® web app. Your Docket® account will reflect any updates made to your state record, typically after a few seconds.

New Jersey residents can access certain test results online at myHealthNJ.com.

Missing dose or result?

Ask your doctor or pharmacist to report your latest vaccine or test result to your state's immunization information system (IIS). Refresh your Docket® account after you receive confirmation that your IIS record had been updated with your latest shot or test result.
