

Search for Immunization Records

Getting Started: Log in to Docket® using the Docket® web app (app.dockethealth.com) or the Docket® mobile app to search your personal and/or family immunization record(s).

1. Start a new search.

In the Search Records section, select the “START NEW SEARCH” button. If using the mobile app, select the plus sign (+) in the top-right corner under the Search tab.

2. Select a record type.

Select the Adult Records tab if you are searching for your immunization record or your family members' record if they are 18 or older with their permission. Select the Child Records tab if you are searching for immunization records for family members under the age of 18.

3. Search your records.

Enter your basic demographic info to search for your personal and/or family immunization records. Select your state's immunization registry (also known as an immunization information system, or “IIS”) on the search form before selecting “Search Records.”

Note: Your name, date of birth, and legal sex entered in Docket® must match your IIS record exactly. In addition, your IIS record must contain a valid email address or phone number.

Troubleshooting:

If Docket® is unable to authenticate you using your Docket-verified email address or phone number, be sure to follow the on-screen instructions to: (a.) verify your identity using alternate contact info, or (b.) update your IIS record with accurate information.
